

Press Release

Compleo and Axians enter into exclusive service partnership for new eTower 200 HPC charger

Focus on top customer experience: Axians Germany takes over commissioning, maintenance and service tasks for innovative Compleo high-performance chargers

Dortmund, August 28, 2024 – [Compleo Charging Solutions](#), one of the leading providers of charging technology for electric vehicles in Europe, and ICT service provider [Axians](#) Germany have signed a service agreement. The Axians Group, part of the VINCI Energies Group's global brand network for ICT solutions, supports companies, municipalities and public institutions, network operators and service providers in modernizing their digital infrastructures and solutions. Axians won a tender and has now been selected as the exclusive service partner for the [eTower 200](#) high-performance charger from Compleo, a [KOSTAL Group](#) company. Axians will provide Compleo with all the services required for the eTower. This includes, for example, commissioning, maintenance and fault clearance. The cooperation will officially begin on September 1, 2024.

Jörg Lohr, CEO of Compleo, comments: "This partnership marks another important step in our corporate vision of offering innovative and high-quality technologies paired with top services for future-oriented electromobility infrastructure in Germany and Europe. Compleo will benefit from Axians' technical expertise and powerful service network for optimal user support."

Henry Frey, Business Area Manager TI Fixnet & Mobile at Axians Germany, agrees: "This cooperation brings together two leading innovators in digital transformation. Axians has expertise in the entire process chain - from planning and implementation to operation as a managed service - and brings an extensive network to the partnership. Together with Compleo, we want to tackle the current and future challenges of electromobility in a targeted manner and further improve the customer experience. This is also a significant step towards sustainability."

The collaboration between Axians and Compleo offers numerous benefits for eTower 200 customers, who benefit from improved access to reliable, strong and efficient services, resulting in higher availability and reliability of the charging infrastructure.

The eTower 200 is the new HPC charging station from Compleo, which impresses with its performance, flexibility and user-friendliness and was designed, developed and produced entirely in-house by Compleo. Its dynamic load allocation across seven power modules maximizes energy output at all times. The benefit is more kilowatt hours sold for Charge Point Operators (CPO). The eTower 200's innovative power electronics offer operators numerous revenue benefits while maintaining high grid compatibility.

The service partnership between Compleo and Axians is initially focused on selected European markets. However, it may be extended to other countries in the future.

Further information about the eTower 200 can be found [here](#).
